# WHAT GOES IN, MUST COME OUT <br> Water Flow of Utah Lake <br> DECIMAL NOTATION 

This lesson plan has been created as a resource for fourth grade teachers to teach the new core standards to their students. It integrates math and science standards in a meaningful and fun way. To see which specific standards are addressed, please refer to them below.

## STANDARDS ADDRESSED:

## $4^{\text {th }}$ Grade Math

## 4.NF. 5 Number and Operations-Fractions Standard 5

Express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and $100 .{ }^{4}$ For example, express $3 / 10$ as $30 / 100$, and add $3 / 10+4 / 100=34 / 100$.
4.NF. 6 Number and Operations-Fractions Standard 6

Use decimal notation for fractions with denominators 10 or 100. For example, rewrite 0.62 as 62/100; describe a length as 0.62 meters; locate 0.62 on a number line diagram.

## $4^{\text {th }}$ Grade Science

Standard 1: Students will understand the physical characteristics of Utah's wetlands, forests, and deserts and identify common organisms for each environment.
Objective 2: Describe the water cycle.

# WHAT GOES IN, MUST COME OUT <br> Water Flow of Utah Lake <br> DECIMAL NOTATION 

| PART 1: SELECTING AND SETTING UP A MATHEMATICAL TASK |  |
| :---: | :---: |
| What are your mathematical goals for the lesson? (i.e., what do you want students to know and understand about mathematics as a result of this lesson?) | Students will be able to express a fraction with denominator 10 as an equivalent fraction with denominator 100. They will be able to use decimal notation for fractions with denominators of 10 or 100 . Students will be able to understand the relationship Utah Lake has with the water cycle. They will learn about evaporation, precipitation, underground water, and springs. |
| - What are your expectations for students as they work on and complete this task? <br> - What resources or tools will students have to use in their work that will give them entry into, and help them reason through, the task? <br> - How will the students workindependently, in small groups, or in pairs-to explore this task? <br> - How will students record and report their work? | - Graph <br> - Notepaper <br> - Graph paper |
| How will you introduce students to the activity to provide access to all students while maintaining the cognitive demands of the task? | They will participate in a hands-on activity. See below. |

Matrix adapted from: Smith, Margaret Schwan, Victoria Bill, and Elizabeth K. Hughes. "Thinking Through a Lesson Protocol: Successfully Implementing High-Level Tasks."

Mathematics Teaching in the Middle School 14 (October 2008): 132-138.

# WHAT GOES IN, MUST COME OUT <br> Water Flow of Utah Lake <br> DECIMAL NOTATION 

## PART 2: SUPPORTING STUDENTS' EXPLORATION OF THE TASK

As students work independently or in small groups, what questions will you ask to-

- help a group get started or make progress on the task?
- focus students' thinking on the key mathematical ideas in the task?
- assess students' understanding of key mathematical ideas, problemsolving strategies, or the representations?
- advance students' understanding of the mathematical ideas?
- What do you know already?
- What is a denominator?
- How can you compare two fractions?
- Which one is bigger?
- How can you tell they are equivalent?

How will you ensure that students remain engaged in the task?

- What assistance will you give or what questions will you ask a student (or group) who becomes quickly frustrated and requests more direction and guidance in solving the task?
- What will you do if a student (or group) finishes the task almost immediately? How will you extend the task to provide additional challenge?
- Give the students an equivalent fraction.
- Ask, "How do you know that?"
- Reinforce students that they are capable of solving the problem
- Break the problem apart and look at little pieces of a time.
- What patterns do you see that could help to solve this problem?
- Have students shade in $10 \times 10$ grids and write the decimal form.

# WHAT GOES IN, MUST COME OUT <br> Water Flow of Utah Lake <br> DECIMAL NOTATION 

| PART 3: SHARING AND DISCUSSING THE TASK |  |
| :---: | :---: |
| How will you orchestrate the class discussion so that you accomplish your mathematical goals? <br> Which solution paths do you want to have shared during the class discussion? In what order will the solutions be presented? Why? <br> What specific questions will you ask so that students will- <br> 1. make sense of the mathematical ideas that you want them to learn? <br> 2. expand on, debate, and question the solutions being shared? <br> 3. make connections among the different strategies that are presented? <br> 4. look for patterns? <br> 5. begin to form generalizations? <br> What will you see or hear that lets you know that all students in the class understand the mathematical ideas you intended for them to learn? | - Have students show simple solutions. Then move to more complex solutions. <br> - Allow student responses. <br> - Walk around the room taking notes on what each group is doing and what order you want to share in. Every group will share their findings. <br> - After everyone shares their answers, what were the common findings within the groups? How were they different? <br> - Are there other ways to solve this problem that were not shared? <br> - Did anyone come up with another way to solve the problem, after watching the other groups go? <br> - Debrief the task with the class talking about the mathematical concepts that were taught. |

## TEACHER BACKGROUND:

Teach this lesson following lessons on the water cycle.

## Inflow

Utah Lake receives water from precipitation, rivers, streams, canals, and groundwater within the watershed. Water leaving Utah Lake flows out by way of the Jordan River, and into the Great Salt Lake.

The three largest tributaries of Utah Lake are the Provo River, Spanish Fork River, and Benjamin Slough. In addition to surface flows, groundwater is another significant source of inflow to Utah Lake. Groundwater enters the Lake via three types of flow: freshwater springs,

# WHAT GOES IN, MUST COME OUT <br> Water Flow of Utah Lake <br> DECIMAL NOTATION 

diffuse fresh seeps, and mineralized springs. The table and figure below summarizes the annual average inflow to Utah Lake from major surface water sources.

Figure 2: Inflow for Utah Lake between 1980-2003

Source: Utah Lake TMDL Study, 2007
Table 1: Average Annual Inflow to Utah Lake (Streams/Tributaries)

| Tributary | Average Annual Flow <br> (acre feet/year) |
| :--- | :---: |
| Provo River | 151,000 |
| Spanish Fork River | 99,700 |
| Benjamin Slough | 36,700 |
| Mill Race Creek | 33,500 |
| Powell Slough | 24,900 |
| Hobble Creek | 19,800 |
| Mill Pond | 12,100 |
| Dry Creek (South of Provo Bay) | 10,600 |
| Spring Creek | 8,800 |
| White Lake Overflow to Goshen Bay | 6,200 |
| Big Dry Creek | 6,000 |
| American Fork River | 5,900 |
| Minnie Creek | 3,900 |
| Little Dry Creek | 1,600 |
| Dry Creek (Lehi) | $\mathbf{9 0 0}$ |
| TOTAL FLOW | $\mathbf{4 2 1 , 6 0 0}$ |

## Outflow

Surface water outflow from Utah Lake occurs only to the Jordan River, located on the north end of the Lake and averages 428,200 acre-feet per year, which is 139 billion gallons, or enough water to fill 2.3 million classrooms with water (an acre is the volume of water that covers one acre to a depth of one foot. It is equal to 325,851 gallons). Evaporation averages 349,800 acre-feet per year, which is 115 billion gallons, or enough water to fill 2.0 million classrooms with water. The figure below summarizes the annual average outflow from Utah Lake.

## TEACHER MATERIALS:

- Computer
- Other possible ideas for generating a circle graph in the classroom
- Excel
- Graph paper
- Other websites
- Google Maps image of Utah Lake
- Clear glass of water

## STUDENT MATERIALS:

- Colored Pencils/Crayons
- Graph paper

# WHAT GOES IN, MUST COME OUT <br> Water Flow of Utah Lake <br> DECIMAL NOTATION 

## PROCEDURE:

## Inflow of Water from Utah Lake

1. Hold up a glass of water and ask students, "How did the water get into this glass?"

- Follow with questions to review what they know about the water cycle, such as "How does water get to the faucet?" "How did the water get to the reservoirs or wells?" Through questions, review ground water, precipitation, and accumulation in rivers and streams.

2. Show a picture or map of Utah Lake and ask the same questions just asked in the attention activity.

- You may choose to make a T-Chart as a comparison between the glass and Utah Lake. Give the students the fractional parts that make up the inflow to Utah Lake. Sources of input into Utah Lake should include precipitation, rivers, groundwater, springs, and irrigation runoff.

3. Allow students to find the sum of two fractions with denominators of 100.
4. Allow students to make a diagram on graph paper using a $10 \times 10$ grid to show the decimal form. For example, for 44/100, the student will shade in 44 squares.

## Outflow of Water from Utah Lake

1. Hold up an empty glass and ask students, "How could water have left this glass or where did it go?"

- Follow with questions to review what they know about the water cycle and other uses of water such as "When you dump a glass of water down the sink where does it go?" Review ground water, evaporation, and accumulation in rivers, streams and lakes.

2. Show a picture or map of Utah Lake and ask this question "Where does the water in Utah Lake go?"

- You may choose to make a T-Chart as a comparison between the glass and Utah Lake. Sources of output from Utah Lake should include evaporation, Jordan River, and irrigation (outflow).

3. Pass out a copy of the graph. Give students the task of finding the sum of two fractions, one with ten as a denominator and the other with 100 as a denominator. Students need to convert fractions with ten as the denominator to 100 . Have the students find the sum of two outflows.

# WHAT GOES IN, MUST COME OUT <br> Water Flow of Utah Lake <br> DECIMAL NOTATION 

4. Allow students to make a diagram on graph paper using a $10 \times 10$ grid to show the decimal form.

## ASSESSMENT:

- Student work.

## EXTENTIONS:

- Have students shade in $10 x 10$ grids and write the decimal form.
- Have students create a graph showing the same information, but missing a fractional part. Have them show that you can find unknown parts when other parts are known. (Relates to 4.MD.7)
